Seeking a 3-month internship in Software Engineering (2027)

2nd year Master's degree in Computer Science and Mathematical Engineering – Polytech Paris-Saclay

Education

Polytech Paris-Saclay

Master's Degree in Computer Science – Work-Study Program

Orsay, France

Sept 2025 – Present

Polytech Paris-Saclay

Two-Year Intensive Preparatory Program (PeiP)

Orsay, France

Sept 2023 – June 2025

Work Experience

Software Engineering Apprenticeship

Python, C/C++, Conan, NMK, gRPC, Jenkins, Artifactory, CMake

Élancourt, France

Thales LAS

Sept 2025 – Present

- Deployed a unified software ecosystem designed to streamline and automate critical production test protocols. Designed a resilience-oriented architecture ensuring interoperability across a heterogeneous instrument fleet and high reliability of delivered metrics.
- Led the strategic expansion of the SOBA project through the development and integration of advanced microservices dedicated to global measurement equipment orchestration. Completely refactored and modularized the RTBX (Remote Tool Box) software library, converting it into an agnostic, highly portable, and infrastructure-reusable software component.

Application Development Internship

Docker, Linux, SSH, MariaDB

Ivry-sur-Seine, France

Algonis

June 2024 – Aug 2024

- Strategic deployment and optimization of Dolibarr CRM via Docker on the development infrastructure, laying the foundation for an efficient digital transformation in logistics management.
- Conducted an in-depth evaluation of the application's features, including a detailed UI/UX analysis, to streamline and maximize adoption within a group subsidiary.

Projects

Development of caro-kann.fr (Node.js, Tailwind, Python, PostgreSQL, Docker, Nginx, Jenkins, Ollama, SSH)

- Deployed an automated multi-platform media system across Web, Threads, Facebook and Instagram. Designed and integrated API-driven automation pipelines for cross-channel content syndication focused on tech, finance, and news. Implemented an automated workflow powered by a Raspberry Pi for remote server data updates and routine system maintenance.

Development of an Amazon E-Commerce Clone (HTML, CSS, JS) 🔄

- Developed an optimized clone of the Amazon e-commerce website featuring a JSON-based database, ensuring smooth order tracking and management. Implemented a responsive interface ensuring an optimal user experience across all devices, featuring collapsible side menus to maintain full content volume without cluttering the display.

Arduino-Based Interactive Games & Embedded Systems (C++)

- Designed and developed an Arduino-based Dinosaur game featuring a 1602 LCD display and intuitive joystick controls. Programmed dynamic directional patterns on a 5 x 8 bitwise-controlled matrix, leveraging advanced bitwise operations for optimized signal processing.

Languages

English (Fluent), French (Native speaker)

Hobbies

Video Editing, Chess, Calisthenics
